

Bluetooth Probe Insertion

How to prepare and insert the Bluetooth probe into the drilled soil opening

Step 1: Remove Label

Step 2: Unscrew cap and turn battery around into correct position

Step 3: Tighten Cap securely

Step 4: Spray water onto the probe

Step 5: Insert Probe into hole and push down by hand until it gets difficult to push the probe further.

Step 6: Use a 24 cm (10") piece of pipe to push down probe to its final depth

This piece of metal will now be shipped with every toolkit !

By using a **metal insertion**, you can push the probe accurately down. (use vertical position)

And also, you can avoid the top part of the probe from damaging.

Pipe ID = 28.5 mm = 1.12"

Step 7: Push down until bottom of probe cap is level with soil surface

Gently, take off the **metal insertion** after installing the probe.

Step 8: Installation is complete

Perfect Installation
